Written Assignment Phase 2 Grading Criteria

Criteria	Unsatisfactory	Satisfactory	Good	Excellent
Methods and key concepts	Tools, methods, frameworks, or concepts are described that generally correspond to the research aims. However, it is not yet clear that they will help to motivate and communicate the end product.	Tools, methods, frameworks, or concepts are described that fit with the identified research aims and could be used to motivate and communicate the end product. They are grounded in relevant literature and suggest a way of evaluating the design.	Tools, methods, frameworks, or concepts are precisely described in such a way that they fit with the identified research aims and show strong promise to aid in the execution of the project and the refinement and communication of the end product. They are grounded in literature in a way that shows some exploration and suggests a precise way of evaluating the design.	Tools, methods, frameworks, or concepts are precisely described in such a way that they fit with the identified research aims and are sure to aid in the execution of the project and the refinement and communication of the end product. They are grounded in compelling literature that is highly applicable, or they have been skillfully adapted to the target context. They suggest a precise, actionable, and adapted way of evaluating the design.
Practical development of design strategy	Initial exploration of the design options has been conducted, and is presented in such a way that the underlying idea is evident. The main problem to be addressed has been identified, although it may be broad or imprecise.	Initial exploration of the design options has been conducted in a thorough way, and is presented in such a way that it can be verified by others. The main problem to be addressed has been identified, and it has been narrowed to create a scope for the project.	Initial exploration of the design options has been conducted in a thorough and systematic way, and is presented in such a way that it can be verified and adapted by others. The main problem to be addressed is defined, sufficiently demarcated and elaborated to aid in setting priorities.	Initial exploration of the design options has been conducted in a thorough and systematic way, and is presented in such a way that it can be verified, generalized, and adapted by others. The exploration shows outstanding creativity, skill, and judgment. The main problem to be addressed is compelling and ambitious, clearly demarcated and elaborated, such that the priorities are clear.

Aim and impact	The potential impact for stakeholders is mentioned. Some indication is given of who can benefit from the tool.	The potential impact for stakeholders is mentioned and framed from their needs. It is clear and explicit who can benefit from the tool.	The potential impact for stakeholders is presented in an interesting way and framed from their point of view in terms of their needs. A clear and nuanced view is given of who can benefit from the tool, what the benefits are, and what the stakeholder's role is in obtaining them.	The potential impact for stakeholders is compelling and framed from their point of view, giving them an important role for which they are motivated. A strong case is made that the design is likely to be applied in real life because of its potential.
Responsible Innovation and Ethics	Ethical issues, value conflicts, barriers, and challenges have been identified, although these may be incomplete, and their connection to the project is not yet clear. A practical strategy has been put forward for developing the design further with relevance for multidisciplinary stakeholders.	Ethical issues, value conflicts, barriers, and challenges have been identified and motivated, although their connection to the specifics of the project is not yet fully clear. A practical strategy has been put forward for achieving values in the design using clear methods in a way that is likely to be relevant to multidisciplinary stakeholders.	Ethical issues, value conflicts, barriers, and challenges have been precisely identified and motivated, making their connection to the project clear. These aspects are substantively present in the research plan. A precise method has been put forward for resolving value conflicts in the design in a way that is sure to be relevant to and convincing for multidisciplinary stakeholders and other affected parties.	Ethical issues have been precisely identified and motivated, making their connection to the project clear. There is a clear and convincing plan to address these in the project. A precise and established method has been put forward for resolving value conflicts in the design in a way that is sure to be relevant to and convincing for multidisciplinary stakeholders and other affected parties. This is adapted skillfully to the study, the stakeholders, other affected parties, and the target context.
Visual Elements	Visual elements are consistent with the overall line of argument and communicative aspects. But they may also raise questions that are not	Visual elements provide some support for the overall line of argument and communicative aspects. But they may also raise questions that are only partly	Visual elements support and enhance the overall line of argument and communicative aspects. Where they raise questions, these are answered	Visual elements strongly support and enhance the presentation of data and the overall line of argument and communicative aspects. Where they raise

	clearly answered in the project. OR: Visual elements do not clearly indicate how they are related to the design (esp. whether they are real outputs or for demonstration purposes).	addressed or answered in the project.	or addressed straightforwardly in the project.	questions, these are compellingly and skillfully answered in the project.
Style and Referencing	Satisfactory expression but with some unnecessary and distracting aspects. The text may contain unnecessary jargon or not fully explain technical and specialized terms. The information density could be higher. A few sources are not adequately acknowledged and introduced throughout the report and presentation, or in the References section. There might be an inconsistent use of referencing throughout the report or presentation. An acknowledged referencing system is used (i.e. APA, Harvard).	Satisfactory expression with few deficiencies that sometimes obscure the intended meaning. It may contain unnecessary jargon or not fully explain technical and specialized terms. The communication of results is well-adapted to the target audience. Sources are adequately acknowledged and introduced throughout the report and presentation, as well as in the References section. The referencing style is consistent throughout the report or presentation, and uses an acknowledged system (i.e. APA, Harvard). The references are appropriate and consistent.	Generally clear manner of expression, that avoids unnecessary jargon and explains technical and specialized terms, fully in line with the principles of scientific and academic writing. The communication of results is well adapted to the target audience. Sources are adequately acknowledged and introduced throughout the report and presentation, as well as in the References section. There is some use of quotes and descriptors of the source features. The referencing style is consistent throughout the report or presentation, and uses an acknowledged system (i.e. APA, Harvard). The references are appropriate and organized.	Consistently clear and concise manner of expression, that avoids unnecessary jargon and explains technical and specialized terms, fully in line with the principles of scientific and academic writing. The communication of results is economical, yet excellently adapted to the target audience. Sources are properly acknowledged and introduced throughout the report and presentation, as well as in the References section. There is highly effective, unobtrusive use of quotes and descriptors of the source attributes. The referencing style is consistent throughout the report or presentation, and uses an acknowledged system (i.e. APA, Harvard). The references show depth of acquaintance with the topic and are organized compellingly.

Responsiveness to critique	The group has not responded to peer review, client and instructor critique in a substantial way.	The group has responded to peer review, client and instructor critique in a substantive way, although it may not be proportional to the importance or relevance of the critique.	The group has responded to peer review, client and instructor critique in a thorough and complete way, taking all relevant points into consideration.	The group has responded to peer review, client and instructor critique in a thorough and complete way, taking all relevant points into consideration and advancing beyond the critique in terms of understanding and achievement.
