Components of Phase 2 (Final Report)

A. Project title: Provide a descriptive title that identifies the type of research, project, and/or topic.

B. Public summary. This summary is intended for a broadly interested audience with different backgrounds. Therefore, please use simple language in your summary. (max 150 words)

Answer at least the following questions:

- What are the questions that the project would address, and what is the tool it would create?

- Why is this project important for stakeholders or the public?

- What challenges are expected?

C. Comprehensive summary (max 2000 words)

- Problem definition and objective(s): the problem you would like to solve, and the change you would like to achieve. Whose problem is it?

- Background of current approaches and knowledge

- Plan of approach / design strategy: indicate the route towards impact. Include methods, frameworks, and key concepts to be used, and which actions from stakeholders are needed to reach the envisioned impact. What challenges are expected?

- Comparison to alternatives: discuss at least one alternative design or approach to addressing the problem, and explain why you have not chosen it

D. Responsible Innovation project statement (max 1000 words)

“In order to bring about ... innovations that enjoy broad societal consensus and to stimulate better technological innovations, [the Dutch scientific research funding organization (NWO)] has developed the Responsible Innovation approach (NWO-MVI). Responsible innovation research identifies the societal aspects (such as ethical, juridical, sociological, economical, and psychological aspects) of innovations and innovation processes at an early stage so that these can be taken into account in the design process. This approach results in identifying the societal aspects of the proposed innovations, insight into the potential questions and objections they may raise, and specific recommendations for the design process, so that the design can be suitably adapted if necessary.” (from the NWO’s instructions for reviewers).

In this section, reflect on the responsible innovation aspects of the project with reference to ethical and normative concepts and frameworks from the course.

E. Reference list. See referencing guide for the course.

F. User narrative (max 500 words): describe a concrete scenario in which specific users access the tool in a particular location, engage with it, and use its outputs, in a way that illustrates its utility.

G. Visual representation of the mock-up or demo (1 A4): provide visual illustration of the intended interface and a sample input/ output, corresponding to the user narrative

H. Documentation of prompts, data sources, and technical tools explored in the project, with step-by-step instructions on what to do with these that would be useful for future students working on a related project

I. Pitch (3-5 minute oral or video presentation with visual elements) meant to persuade key stakeholders and decision-makers of the feasibility and promise of the project. [Group assignment to be submitted separately from the other components]

J. Personal reflection (500 words): each student reflects on their own performance, ethical issues that they engaged with during the project, and group dynamics, and their viewpoint on the practical significance of these experiences for future projects. [Individual assignment to be submitted independently, separately from the other components]

K. Peer evaluation [individual assignment to be submitted with personal reflection]
