

Written Assignment Stage 1 Grading Criteria

Criteria	Unsatisfactory	Satisfactory	Good	Excellent
<i>Topic and aims</i>	The topic and aim are not yet specified, and the target context has been mistakenly identified or is missing.	The topic and aim are indicated for this stage of the project, reflecting adequate grounding in empirical evidence and some idea of the (possible) target context(s).	The topic and aim are clearly indicated for this stage of the project, reflecting quality research on background literature and a correct understanding of the (possible) target context(s).	The topic and aim are precisely defined for this stage of the project, reflecting extensive research on background literature and a sophisticated understanding of the (possible) target context(s).
<i>Methods and key concepts</i>	Tools, methods, frameworks, or concepts are not articulated, not well chosen, or do not correspond to the actual research aims.	Tools, methods, frameworks, or concepts are described that generally correspond to the research aims. However, it is not yet clear that they will help to motivate and communicate the end product.	Tools, methods, frameworks, or concepts are described that fit with the identified research aims and could be used to motivate and communicate the end product.	Tools, methods, frameworks, or concepts are precisely described in such a way that they fit with the identified research aims and promise to aid in the execution of the project and the refinement and communication of the end product.
<i>Practical development of design strategy</i>	Initial exploration is not adequate, or is not presented in such a way that the underlying idea is evident. No strategy has been put forward for developing the design with relevance for multidisciplinary stakeholders.	Initial exploration has been conducted, and is presented in such a way that the underlying idea is evident. A practical strategy has been put forward for developing the design further with relevance for multidisciplinary stakeholders.	Initial exploration has been conducted in a thorough way, and is presented in such a way that it can be verified by others. A practical strategy has been put forward for identify values and user needs and incorporate them in the design in a way that is sure to be relevant to multidisciplinary stakeholders.	Initial exploration has been conducted in a thorough and systematic way, and is presented in such a way that it can be verified and adapted by others. A precise and practical strategy has been put forward to identify values and user needs and incorporate them in the design in a way that is sure to be relevant to and convincing for multidisciplinary stakeholders.
<i>Aim and impact</i>	The potential impact for stakeholders is not mentioned or framed in terms of their	The potential impact for stakeholders is mentioned.	The potential impact for stakeholders is mentioned and framed from their needs. It is	The potential impact for stakeholders is presented in an interesting way and framed from

	interests and needs. It is not clear and explicit who can benefit from the tool. Ethical issues, value conflicts, barriers, and challenges have not been persuasively identified and there is not a plausible connection to the project.	Some indication is given of who can benefit from the tool. Ethical issues, value conflicts, barriers, and challenges have been identified, although these may be incomplete, and their connection to the project is not yet clear.	clear and explicit who can benefit from the tool. Ethical issues, value conflicts, barriers, and challenges have been identified and motivated, although their connection to the specifics of the project is not yet fully clear.	their point of view in terms of their needs. A clear and nuanced view is given of who can benefit from the tool, what the benefits are, and what the stakeholder's role is in obtaining them. Ethical issues, value conflicts, barriers, and challenges have been precisely identified and motivated, making their connection to the project clear.
<i>Style and Audience</i>	There are many unnecessary, unnatural, and/or distracting aspects such as excess bullet points, boldface text, "fluff" sentences that do not add meaning, false contrasts, and overdependence on stock formulations. The information density is low.	Satisfactory expression but with some unnecessary and distracting aspects. The text may contain unnecessary jargon or not fully explain technical and specialized terms. The information density could be higher.	Generally clear manner of expression, that avoids unnecessary jargon and explains technical and specialized terms, fully in line with the principles of scientific and academic writing. The communication of results is well adapted to the target audience.	Extremely clear manner of expression, that avoids unnecessary jargon and explains technical and specialized terms, fully in line with the principles of scientific and academic writing. The communication of results is excellently adapted to the target audience.
<i>Referencing</i>	There might be no sources referenced in the text or presentation, or inadequate information to track down the sources.	A few sources are not adequately acknowledged and introduced throughout the report and presentation, or in the References section. There might be an inconsistent use of referencing throughout the report or presentation. An acknowledged referencing system is used (i.e. APA, Harvard). There are useful references but the search strategy is not explicitly described.	Sources are adequately acknowledged and introduced throughout the report and presentation, as well as in the References section. The referencing style is consistent throughout the report or presentation, and uses an acknowledged system (i.e. APA, Harvard). The references are very solid and the search strategy is explicitly described.	Sources are properly acknowledged and introduced throughout the report and presentation, as well as in the References section. The referencing style is consistent throughout the report or presentation, and uses an acknowledged system (i.e. APA, Harvard). The references provide compelling support and the search strategy is systematic.
